

## Industry Benefits:

### **Manufacturing:**

*Asset Utilization— Reduce your rental bills. Reports can be produced to indicate slow moving cylinders.*

### **Construction:**

*Tracking a cylinder at a job site with multiple contractors will be resolved. The contractor originally charged for the cylinder will receive credit when it is returned.*

### **Research Labs/Universities:**

*Barcode traceability will determine cylinder fill date, batch lot number and purity specifications.*

*Proper credit for cylinder return in facilities with multiple researchers. Within any industry, Tracker will close the loop on tracking your cylinders.*

# Cylinder Tracking

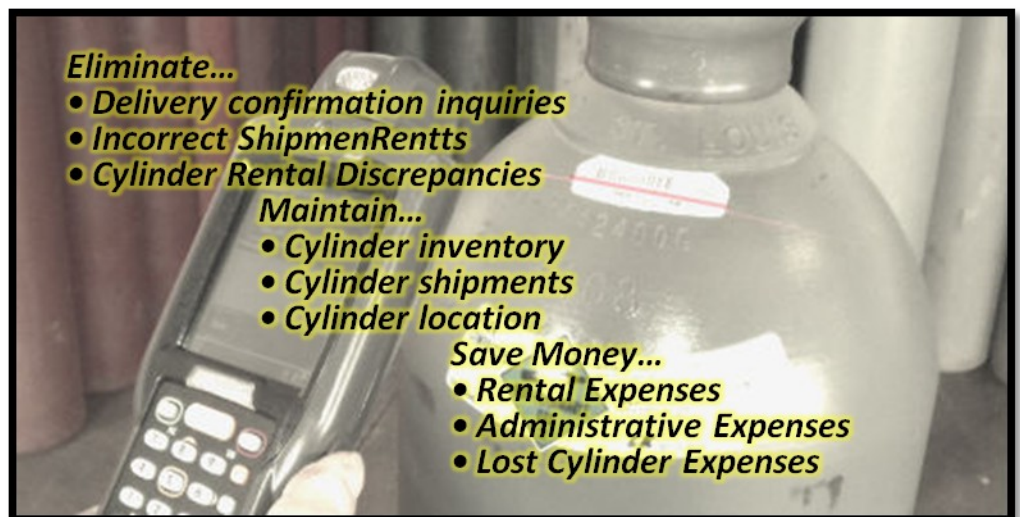

***Shipping and returning cylinders involves many transactions and opportunities for errors. Errors resulting in cylinder and billing discrepancies.***

***Tracker is a bar coding program that will reduce these errors by auto-id data collection.***

***Bar code labels are placed on each cylinder. Each bar coded cylinder is scanned when the cylinders leave and return to our dock. The bar code tells us who has the cylinder, the location and when the cylinder was returned.***

***We will have the capability of alerting our customers when a cylinder has not been returned. If a lost or stolen cylinder is returned, the bar code will let us know whom the cylinder belongs to and who should receive credit for the cylinder.***

***Tracker is designed to guarantee accuracy. Built in checks and balances ensure the correct cylinder quantities are shipped and returned to the correct customer.***
